Assignment 2 mqtt twitter

Demo

This screenshot demonstrates the live interaction between the publisher and subscriber running simultaneously on localhost.

- When the publisher posts a tweet with the hashtag #, the subscriber immediately receives and displays it in the feed area.
- This verifies the correct functioning of the **MQTT publish-subscribe model**, **broker connection**, and **real-time message delivery**.

This screenshot shows the subscribe/unsubscribe option being used while the subscribed user to that hashtag receives tweets while the unsubscribed user doesn't.
